

Public Notice

Bountiful City Water Department completed all the necessary work required to mitigate the elevated levels of radium 226 and 228 that were being produced at our 17.8 Well site in July 2021. We got approval from DDW (Division of Drinking Water) for our blending plan and all work performed that was completed in December 2021 are compliant with the EPA (Environmental Protection Agency) standards for radium. Bountiful Water will continue to monitor the water quality throughout the city.

Mayor Kendalyn Harris
Bountiful City
795 South Main Street
Bountiful, Utah 84010

Dear Mayor Kendalyn Harris:

The Division of Drinking Water at the Utah Department of Environmental Quality would like to express our appreciation on how committed Bountiful City is in providing their residents with safe, high quality drinking water, and how diligently they have monitored any areas of concern. We are impressed by the diligence that public works professionals have exhibited, and the transparency Bountiful City has demonstrated to their community.

Jerry Wilson and Kraig Christensen have had excellent communication with the Division in the handling of their Tier 2 drinking water Radium violation. They expediently developed a plan to mitigate radium contamination and handled the public notice distribution with the utmost professionalism. Bountiful City completed construction, worked through the Division's permitting process, and resolved the violation six months prior to the required deadline, a Division record. We have been very impressed with the improvements that Bountiful City Public Works have made and to the elevated degree of commitment they have shown by running their water system exceptionally.

We appreciate the opportunity to work in partnership with the Bountiful City, and we congratulate you on having such dedicated staff and job well done.

Mayor Kendalyn Harris
