

400 North

IMPROVED

Bountiful

Construction Update

June 27, 2017

Project Update:

All roadway and quality control items are complete!

Tuesday, June 27, crews will place grass seed mix on the gore area between the northbound off-ramp and the 400 North bridge. This seed mix is coated in a mix of fertilizer to help it establish roots and prevent erosion.

Crews are completing final sod placement and landscape items through early July. Expect intermittent day time lane closures near landscape crews on the westbound side of 400 North near US-89 (500 West) this week and near north Main Street later this week and next.

These are the final project activities and we anticipate leaving the project corridor by mid-July.

All work activities are subject to change due to weather, material or equipment delays.
